

BootHop

UK Peer-to-Peer Delivery Marketplace | www.boothop.com

Web Platform: Public & User Pages Reference

Version 2.0 | August 2025 | Confidential - Internal Use Only

WHAT IS BOOTHOP?

BootHop is a UK-registered peer-to-peer delivery marketplace that connects Hoopers (people who need goods transported) with Booters (travellers with spare luggage capacity). Instead of paying for a courier, senders pay travellers who are already flying or driving the route - achieving 60-80% savings while travellers earn extra income on trips they were already making.

BootHop handles the full logistics chain: item posting, AI safety checks, KYC identity verification, in-app messaging, a tamper-evident QR seal system, real-time delivery tracking, and manual escrow payment release. A Business Portal serves SMEs needing same-day or priority deliveries, and a Priority Partner tier provides SLA-backed enterprise logistics with dedicated carriers. The platform operates across the web (boothop.com) and via native iOS/Android apps (BootHop Mobile v1.2.0).

WHAT'S IN THIS DOCUMENT

- Section 1 - Public Marketing Pages (13 routes): Homepage, How It Works, Pricing, About, Contact, Help, Guide, Trust & Safety, Legal.
- Section 2 - Authentication & Onboarding (5 routes): Login, Register, OTP Verify, Role Intent, Quick Start Wizard.
- Section 3 - Sending Items / Hooper Flow (12 routes): Send landing, SEO city pages, Create Request, Browse Requests, Hooper Dashboard, Checkout.
- Section 4 - Carrying Items / Booter Flow (3 routes): Journeys marketplace, Post Journey (with AI safety check), Booter Dashboard.
- Section 5 - Match & Delivery Flow (11 routes): Match detail, Declaration, Inspection, Seal print, Messaging, Live tracking, Commit, Confirm, Ratings.
- Section 6 - Compliance & Safety (7 routes): AI Safety Check tool, KYC flow, KYC video, Customs guide, Duty calculator, Carrier agreement.

- Section 7 - Account Management (4 routes): Dashboard, Profile, Delete Account, GDPR data erasure.
- Section 8 - Blog & Content (5 routes): Blog home, published articles, dynamic post template.
- Section 9 - Flights & Travel (4 routes): Flight search, route pages, airline pages, airport pages.
- Section 10 - Utility (3 routes): Deep link handler, file open handler, media/watch page.

SECTION 1 - PUBLIC MARKETING PAGES

/	User	Homepage: The primary entry point for all visitors. Displays live journey availability stats (active carriers, live routes), a role switcher (Send / Travel / Business), animated how-it-works overview, social proof testimonials, trust signals (KYC badge, escrow badge, AI safety badge), featured routes, and a prominent sign-up call-to-action. The page is dynamically rendered with live data from Supabase. <i>SEO-optimised with structured data markup. Loads live journey count and top routes from the public API.</i>
/how-it-works	User	How It Works: Full visual explainer of the BoothHop peer-to-peer delivery process. Covers both the Hooper (sender) and Booter (carrier) perspectives across 6 illustrated steps: Post Item -> Find a Match -> Agree Terms -> KYC & Compliance Check -> Carrier Collects & Seals -> Delivery Confirmed & Funds Released. <i>Includes a 30-second explainer video embed and downloadable one-page summary.</i>
/pricing	User	Pricing Page: Transparent, calculator-style pricing page. Explains the platform commission structure (currently 5% of the agreed reward), shows example scenarios (small parcel Lagos -> London = £45 reward, sender pays £47.25), and compares BoothHop costs against courier alternatives. No hidden fees. <i>Pricing is subject to change. Business portal pricing is on a separate /business/pricing page.</i>
/about	User	About BoothHop: Company story, founding vision ("What if you could ship a parcel on the next flight for the price of a coffee?"), mission statement, UK company registration details (Companies House), and founding team profiles. Includes an interactive timeline from founding to current milestones. <i>Registered in England & Wales. Company details verified and displayed for trust.</i>
/contact	User	Contact Us: Multi-channel contact page with a web form (routed to info@boothop.com via Resend), direct email link, UK phone number, WhatsApp quick-link, and office address. Form fields: Name, Email, Subject, Category (Support / Business / Press / Other), Message. Submissions trigger an auto-reply and admin email. <i>WhatsApp link uses dynamic number from WHATSAPP_NUMBER env var to avoid hardcoding.</i>
/help	User	Help Centre: Searchable FAQ library organised into categories: Getting Started, Sending Items, Carrying Items, Payments & Refunds, Disputes & Cancellations, KYC & Identity, Customs & Compliance, Mobile App. Each answer links to the relevant platform page for direct action. Expandable accordion format.

/guide	User	User Guide: Comprehensive written guide (8,000+ words) covering the complete end-to-end user journey from registration to delivery. Includes: how matching works, what to do when matched, KYC steps, how to seal a package, tracking your delivery, confirming receipt, and how escrow release works. Also covers prohibited items, customs advice, and dispute process. <i>This is the authoritative help document - all support staff reference this first.</i>
/trust-safety	User	Trust & Safety Hub: Detailed explanation of every safety mechanism built into BootHop. Covers: mandatory KYC identity verification (Stripe Identity) before funds release, AI-powered pre-flight item safety check (Claude AI), tamper-evident QR package seal, in-app escrow (funds held until both parties confirm delivery), content-filtered messaging (no phone numbers shared until payment confirmed), and dispute resolution process. <i>This page is critical for user confidence. Updates here require legal review.</i>
/carrier-agreement	User	Carrier Agreement: Full legal agreement that all carriers must read and formally accept before making their first delivery. Covers: carrier responsibilities, prohibited item list, packaging standards, liability limits, KYC compliance obligation, insurance guidance, and BootHop's right to suspend or ban carriers for violations. Electronically signed via /carrier/accept.
/edi-policy	User	Equality, Diversity & Inclusion Policy: Public-facing EDI policy statement. Covers BootHop's commitment to equal treatment of users regardless of background, race, religion, gender, or disability. Includes reporting mechanism for discriminatory behaviour.
/terms	User	Terms of Service: Full platform terms and conditions (T&Cs) governing use of boothop.com and the mobile app. Covers: user eligibility, prohibited uses, payment terms, intellectual property, dispute resolution process, limitation of liability, governing law (England & Wales), and account termination clauses. Last updated August 2025.
/privacy	User	Privacy Policy: GDPR-compliant privacy policy explaining what personal data is collected (name, email, phone, ID documents, device data), how it is used, legal basis for processing, retention periods, who it is shared with (Supabase, Stripe, Resend, Anthropic AI), how to exercise data rights (access, erasure, portability), and DPO contact details.
/cookie-policy	User	Cookie Policy: Explains all cookie categories used on boothop.com: Strictly Necessary (session, CSRF), Analytics (Google Analytics GA4), Functionality (preferences). Lists specific cookie names, purposes, and lifetimes. Includes a cookie consent management component - users can accept or reject non-essential cookies.

SECTION 2 - AUTHENTICATION AND ONBOARDING

/login	User	Login Page: Passwordless email OTP login. User enters their registered email address and clicks "Send Code". They receive a 5-character code (4 digits + 1 letter) by email. Valid for 10 minutes. On success, issues a signed JWT cookie (boothop_session, 7-day TTL). Failed attempts are rate-limited (5 attempts per 15 minutes per IP). <i>Uses custom JWT session cookies - NOT Supabase Auth. Cookie: boothop_session. Business portal uses boothop_biz_session.</i>
/register	User	Registration Page: New user sign-up form. Collects: Full Name, Email Address, Phone Number (international format), and Role Selection (Sender / Carrier / Both). On submit, checks for existing account, sends OTP verification email via Resend, creates a draft user record. No password required - the OTP proves email ownership.
/verify	User	OTP Verification Page: Code entry screen. User enters the 5-character code from their email. Shows a 10-minute countdown timer. Incorrect code shows an error with remaining attempts. On success, marks the user as verified, issues the session cookie, and redirects to /intent (role selection) for new users or the last page for returning users.
/intent	User	Role Intent Screen: Post-login screen shown to new users or users who have not selected a role. Two large action cards: "I want to SEND something" (routes to /requests/create or /hooper-dashboard) and "I want to CARRY something and earn" (routes to /journeys/create or /booter-dashboard). Selection is saved to the user record.
/start	User	Quick Start Wizard: Multi-step guided form to create the first request or journey without knowing the full platform. Steps: (1) Choose role, (2) Enter route (from/to), (3) Pick travel date, (4) Describe item size, (5) Set budget. At the end, the wizard creates a draft record and guides the user to complete it.

SECTION 3 - SENDING ITEMS (HOOPER FLOW)

/send	User	Send an Item - Landing Page: Marketing hub for senders (Hoopers). Hero section with live carrier count and active routes. Explains cost savings vs. couriers, social proof testimonials from senders, and a quick cost estimator widget. Large CTA buttons direct to /requests/create (post an item) or /journeys (browse available carriers). SEO-optimised for keywords like "peer-to-peer parcel delivery UK".
/send/uk-same-day	User	UK Same-Day Delivery - Landing Page: SEO-targeted page for domestic same-day delivery within the UK. Features available carrier cards on UK routes, estimated delivery windows, and pricing examples. Directs users to post a same-day request. Targets searches like "same day delivery courier UK alternative".
/send/uk-to-europe	User	UK to Europe Delivery - Landing Page: Landing for UK-to-EU route requests. Highlights customs advice specific to post-Brexit trade, popular EU routes (UK-France, UK-Germany, UK-Netherlands), carrier profiles, and example delivery stories. Links to the customs guide for EU-bound items.

/send/working-away	User	Working Away - Delivery Landing Page: Targeted at professionals living or working abroad who need items from home (medication, documents, food, clothing). Shows popular routes and carrier availability. Human interest copy and testimonials from diaspora users. CTA posts a request on their home-to-current-country route.
/send/student-delivery	User	Student Delivery - Landing Page: Student-specific landing page targeting university cities. Showcases how students use BootHop to have items sent by family when visiting home or starting term. Shows popular routes (Lagos -> Manchester, Delhi -> London, Accra -> Birmingham). CTA for parents to post a request.
/send/business-urgent	User	Business Urgent Delivery - Landing Page: B2B-adjacent page for businesses needing same-day or next-flight urgent delivery of documents, samples, or spare parts. Differentiates from the full Business Portal - aimed at one-off urgent jobs rather than ongoing accounts. Shows typical turnaround times and case studies.
/send/[cityroute]	User	City Route Dynamic Landing Pages (110+ pages): Dynamic SEO pages for specific city pairs (e.g. /send/london-to-lagos, /send/dubai-to-accra). Each page shows live carrier availability on that route, average delivery time, typical pricing, and a pre-filled "Post Request" button. Slug is resolved by the routing API. Examples: /send/london-to-lagos, /send/accra-to-london, /send/toronto-to-abuja. Auto-generated for all active routes.
/requests/create	User	Create Delivery Request Form: The primary sender workflow entry point. A multi-step form collecting: Item Name, Description, Category (documents, clothing, electronics, food, other), Dimensions (L x W x H cm), Weight (kg), Declared Value (GBP), Origin City & Country, Destination City & Country, Preferred Delivery Date, Reward Offer (GBP). AI safety check fires automatically for international routes on item name entry. The submission creates a request record in Supabase and triggers matching logic. Prohibited items are blocked at submission. The AI check is advisory - admin always reviews flagged items.
/requests	User	Browse Delivery Requests Marketplace: Public marketplace of all open (unmatched) delivery requests posted by Hoopers. Carriers (Booters) browse, filter, and claim requests. Filter options: Origin City, Destination City, Date Range, Item Category, Max Weight, Min Reward. Each card shows: item description (not exact - redacted until matched), route, date, weight, and reward. Claim button opens a confirmation flow. Item descriptions are partially hidden pre-match to prevent direct contact bypass.
/hooper-dashboard	User	Hooper (Sender) Dashboard: Personal control centre for senders. Shows: Active Matches (with status chip and action buttons), Posted Requests (open, awaiting carrier), Completed Deliveries (history with ratings), and a Spending Summary (total paid, in-escrow amount). Each match card links to /matches/[id]. Notifications panel shows pending actions (e.g. "Confirm your item has arrived").

/checkout/[matchId]	User	Payment Checkout Page: The escrow payment submission page. Shows the agreed reward amount + BootHop commission breakdown. Payment is MANUAL - sender completes a guided form with bank transfer reference or submits proof of payment. Funds are NOT processed by Stripe here (Stripe is only used for KYC). On submit, match status moves to payment_processing, admin receives an email alert to confirm receipt. <i>Manual escrow model. No card processing at this step. Admin must confirm receipt before status advances to active.</i>
---------------------	------	---

/payment/success	User	Payment Confirmed Page: Success screen shown after payment submission. Confirms BootHop has received the payment request. Shows: reference number, expected confirmation timeline (1-2 business hours during UK business hours), next steps, and a link back to /matches/[id] to monitor status. Sends a confirmation email to the sender.
------------------	------	---

SECTION 4 - CARRYING ITEMS (BOOTER FLOW)

/journeys	User	Live Journeys Marketplace: Browse all active carrier journeys posted by Booters. Each card shows: Origin -> Destination, Departure Date, Arrival Date, Available Capacity (kg), Price per kg, Airline (where disclosed), and carrier rating. Filter sidebar: Departure City, Destination City, Date Range, Min Capacity, Max Price. Clicking a journey card opens a summary modal with an "Express Interest" button to initiate a match.
-----------	------	--

/journeys/create	User	Post a Journey Form: The primary carrier (Booter) entry point. Multi-step form collecting: Origin City & Country, Destination City & Country, Departure Date, Arrival Date, Airline, Flight Number (optional), Spare Capacity (kg), Price per kg (GBP), Item Restrictions (free text). For international routes, an inline AI route compliance panel appears automatically after 800ms idle - it fires a real-time check to Claude AI via /api/ai/safety-check and displays PERMITTED / RESTRICTED / PROHIBITED results. Submitting creates a journey record and makes it visible in the marketplace. <i>AI check uses real-time country customs knowledge - NAFDAC (Nigeria), HMRC (UK), CBP (US), CITES (endangered species), etc. Admin is notified by email on any REVIEW_REQUIRED verdict.</i>
------------------	------	---

/booter-dashboard	User	Booter (Carrier) Dashboard: Personal control centre for carriers. Shows: Active Deliveries (with status chip and action buttons), Your Posted Journeys (open, accepting requests), Completed Deliveries (history with ratings and earnings), and an Earnings Summary (total earned, pending release). KYC status is shown prominently - carriers are prompted to complete KYC if verification is pending for an active match.
-------------------	------	--

SECTION 5 - MATCH AND DELIVERY FLOW

/matches/[id]	User	Match Detail Page: The central hub for a confirmed match. Shows: Match Status Timeline (matched -> agreed -> committed -> kyc_pending -> kyc_complete -> payment_processing -> active -> delivery_confirmed -> completed), Sender and Carrier profile summaries, Item details, Delivery route and dates. Action buttons change based on role and status (e.g. "Agree to Terms", "Commit to Delivery", "Confirm Receipt"). Tabs: Overview, Chat, KYC, Declaration, Tracking. All sub-flows (declaration, inspection, seal) link out from this page. <i>Status badge colours: grey=matched, blue=agreed, amber=committed, orange=kyc_pending, purple=active, green=completed, red=cancelled.</i>
/matches/[id]/declare	User	Item Declaration Form: Formal customs declaration required before payment is released. Fields: Item Category (dropdown with 40+ customs categories), Detailed Description, Country of Origin, Declared Value (GBP), Number of Items, Is it a Gift? (yes/no), Prohibited Items Checklist (carrier must confirm item does not contain 15 categories of restricted goods), Legal Acknowledgement (digital signature). Can be saved as draft. Evidence uploads (photos of the item) are attached here. <i>Required for all matches. Incomplete declarations block escrow release. Admin reviews all international declarations.</i>
/matches/[id]/inspection	User	Carry-On Inspection Confirmation: Screen where the carrier confirms they have physically inspected the item before accepting it. Checklist: Packaging is intact, Item matches description, No prohibited items detected, Weight is as declared, Sender was present during inspection. The carrier must tick all boxes and submit. This step is logged with a timestamp and creates an audit trail. If inspection fails any point, the carrier can flag the issue and the match enters a disputed state.
/matches/[id]/seal/print	User	Print Seal / QR Label: Generates a unique tamper-evident QR code seal for the package. The QR code contains an encrypted token linked to this specific match. Printing instructions are provided for standard A6 label printers or plain paper. The QR label is attached to the package by the sender in the presence of the carrier. Scanning the QR code at delivery confirms handover and is logged as a blockchain-style audit event. <i>QR token is one-time use and match-specific. Scanning logs the time, GPS location, and device ID.</i>
/messages	User	All Messages Inbox: Unified messaging inbox listing all active and historical match conversations. Each thread shows: other party's name (redacted pre-payment), match route, last message preview, unread count badge, and match status chip. Threads are sorted by most recent activity. Content filtering is active throughout - phone numbers, emails, and social handles are detected and masked until payment is confirmed. <i>Message filtering uses regex + AI pattern detection for contact detail extraction attempts.</i>
/messages/[matchId]	User	Match Chat Thread: Full in-app messaging thread between sender and carrier for a specific match. Real-time via Supabase Realtime subscriptions. Shows message history, delivery read receipts, and system events (e.g. "Payment confirmed by admin - full contact details now shared"). Photo attachment is supported for sharing packing photos. Content filter runs on every message before delivery.

/track/[matchId]	User	Live Delivery Tracking: Real-time tracking screen for an active delivery. Shows: interactive map with carrier's last known location (updated every 2 minutes via carrier location API), delivery route line, status timeline with timestamps, and estimated arrival window. Also shows: Item sealed status, KYC cleared badge, and one-tap contact button (visible only after payment confirmed). Match must be in "active" status for tracking to display.
/commit	User	Commit to Delivery: The carrier's commitment confirmation page. Reached after KYC is complete and the carrier has physically received the item from the sender. Carrier confirms: "I have received this item, inspected it, and am committed to completing this delivery." Submitting moves the match status from kyc_complete to active and notifies the sender that the carrier is in transit.
/confirm	User	Confirm Delivery: Dual-confirmation delivery completion page. Both the sender and carrier must separately confirm that the item was delivered. Sender confirms on their side; carrier confirms on theirs. When both confirmations are received, the match moves to delivery_confirmed and admin receives an email prompt to release escrow funds. One-click confirmation links are also sent by email.
/ratings/create	User	Leave a Rating: Post-delivery rating and review form. Both parties rate each other (1-5 stars) across three dimensions: Reliability, Communication, and Item Safety (senders also rate packaging compliance). Free-text review is optional (max 500 characters). Ratings are public and shown on profile cards in the marketplace. Both parties must rate before reviews are published to prevent bias.
/share	User	Referral Share Page: Personal referral hub. Shows the user's unique referral link and QR code. Share buttons for WhatsApp, Twitter/X, LinkedIn, Facebook, and email. Tracks click-through and sign-up conversion per referral. Referral rewards (credit towards next booking) are shown in the dashboard once a referral converts.

SECTION 6 - COMPLIANCE AND SAFETY

/ai-check	User	AI Safety Assistant - Free Public Tool: A standalone version of the BootHop AI compliance check, available to any visitor without login. User enters: Item Description, Origin Country, Destination Country. Claude AI (claude-sonnet-4-6) analyses the item against real-time country customs rules and returns one of four verdicts: PERMITTED (safe to carry, no restrictions), RESTRICTED (can be carried with conditions - documentation required), PROHIBITED (cannot be carried - full stop), or REVIEW_REQUIRED (AI is uncertain - human review needed). Explanation is shown in plain English with specific references to relevant laws (e.g. NAFDAC Act s.5, UK HMRC Notice 701/21). <i>Admin receives an email notification for every REVIEW_REQUIRED result, even from unauthenticated users. This powers the main platform safety check too.</i>
/kyc	User	KYC Overview Page: Plain-English explanation of the Know Your Customer (KYC) identity verification requirement. Explains: why it is required (anti-money laundering, customs compliance, UK regulations), what documents are accepted (passport, driving licence, national ID), what the selfie check involves, typical completion time (2-5 minutes), and what happens if KYC fails. Links to /kyc/[matchId] when a specific match requires verification.
/kyc/[matchId]	User	KYC Verification Flow: Stripe Identity-powered identity verification tied to a specific match. The carrier completes: (1) Document selection (passport / driving licence / national ID), (2) Front and back photo of the document, (3) Selfie with liveness check, (4) Stripe runs automated verification (30-60 seconds). On pass, match advances to kyc_complete; on fail, admin is notified and carrier can re-attempt after 24 hours. The link is match-specific to prevent KYC gaming. <i>Stripe Identity handles all biometric data. BootHop receives only a pass/fail result - no raw biometric data is stored by BootHop.</i>
/kyc/video	User	Video KYC Verification: Alternative verification path for carriers who cannot complete the standard Stripe Identity flow (e.g. unsupported document type, accessibility requirements). Carrier records a short video selfie holding their ID document and stating their name and the match ID. Video is reviewed manually by the BootHop compliance team within 4 business hours. Admin is notified by email with a review link.
/customs	User	Customs Guide: Comprehensive plain-English customs guide covering: UK import/export rules, prohibited and restricted items (full HMRC list), declaration thresholds (what triggers duty), how BootHop handles customs declarations end-to-end, CITES-protected item guidance, food and plant import rules, and country-specific sections (Nigeria/NAFDAC, US/CBP, EU, Canada/CBSA). Written for non-experts.
/customs/duties	User	Duty Calculator: Interactive tool for estimating import duties and taxes. User selects: Item Category (dropdown), Destination Country, Declared Value (GBP). Tool returns: estimated duty rate (%), estimated total duty payable, whether VAT applies, and any specific exemptions. Data is based on the latest published HMRC and WCO tariff schedules. Disclaimer: estimates only - actual duty determined by receiving country customs authority.

/carrier/accept	User	Accept Carrier Agreement: One-page carrier agreement acceptance flow. Shows a summary of key obligations (no prohibited items, inspection required, KYC mandatory, no direct payment outside platform). Single checkbox: "I have read and agree to the Carrier Agreement." On submit, logs the acceptance with timestamp and IP address to the user record. Required before a carrier can complete their first delivery. Link emailed to new carriers after their first match.
-----------------	------	--

SECTION 7 - ACCOUNT MANAGEMENT

/dashboard	User	Main Dashboard (Smart Redirect): Role-aware dashboard entry point. Detects the user's primary role (sender or carrier) and shows the most relevant view. Senders see their active matches with pending actions, posted requests awaiting carriers, and recent delivery history. Carriers see active deliveries, posted journeys, earnings summary, and KYC status. Dashboard also shows system notifications: payment confirmed, review required, delivery reminder.
/profile	User	My Profile: Account management page. Edit: Full Name, Phone Number, Profile Photo (uploaded to Supabase Storage), Language Preference. View (read-only): Email Address (cannot change after registration), KYC Verification Status, Carrier Agreement Status, Member Since Date. Notification Preferences section: toggle email notifications for match updates, payment events, and promotional messages. Save triggers a Resend confirmation email.
/delete-account	User	Delete Account: Account deletion request page. User must type "DELETE" to confirm intent. On submit, triggers a GDPR-compliant erasure workflow: anonymises the user record, cancels active matches, sends refund instructions for any escrowed funds, and queues deletion of all personal data within 30 days. Admin is notified of the deletion request. A confirmation email is sent with an undo link valid for 7 days.
/delete-data	User	Delete My Data (GDPR Erasure): Right-to-erasure request form under GDPR Article 17. User submits their email address and the type of data they want deleted (all data / messages only / delivery history only). Request is logged in the admin panel and must be actioned within 30 days per GDPR. User receives an acknowledgement email with a case reference number.

SECTION 8 - BLOG AND CONTENT

/blog	User	Blog Home: The BootHop content hub. Lists all published articles in reverse chronological order with featured image, title, excerpt, author name, and publication date. Categories: Customs & Compliance, Delivery Tips, Travel Logistics, BootHop Updates, Industry News. Sidebar shows popular articles, tag cloud, and a newsletter sign-up widget. Articles are fetched from Blogger CMS via the Blogger API.
-------	------	---

/blog/customs-clearance-services	User	Blog: What Are Customs Clearance Services? Explains how traditional customs brokers work, why they are expensive, and how BootHop's AI-assisted declaration and carrier-based model simplifies clearance for small shipments under de minimis thresholds. Includes a comparison table of clearance costs.
/blog/small-business-cross-border-shipping	User	Blog: Cross-Border Shipping for Small Businesses: A practical guide for UK SMEs on how to reduce international shipping costs using peer-to-peer delivery. Covers: when BootHop is suitable, how to declare goods for business use, VAT implications, and how to use the Business Portal for higher volumes.
/blog/on-board-courier-time-critical-logis	User	Blog: On-Board Courier - The Secret of Time-Critical Logistics: Explains the on-board courier (OBC) model where a traveller hand-carries urgent items. BootHop automates this through the platform. Includes case studies from BootHop deliveries: a spare part for a manufacturing line flown from Birmingham to Lagos in 18 hours.
/blog/[slug]	User	Blog Post (Dynamic): Dynamic template that renders any Blogger article by slug. Fetches content via the Blogger API (BLOGGER_API_KEY). Supports: rich text, embedded images, YouTube video embeds, custom code blocks. Open Graph meta tags are set from article metadata for social sharing previews. Related articles suggested at the bottom.

SECTION 9 - FLIGHTS AND TRAVEL

/flights	User	Flight Search Hub: Browse and search upcoming flights on routes where BootHop carriers are active. Shows a live feed of recently posted carrier journeys grouped by route, along with flight search links (powered by Travelpayouts affiliate integration). Helps travellers discover routes where they can earn by carrying goods on their upcoming flights. <i>Travelpayouts affiliate integration - flight links include affiliate marker for commission.</i>
/flights/[route]	User	Route Flights Page (Dynamic): Shows all flights and active carrier journeys on a specific route (e.g. /flights/london-lagos). Displays: upcoming flight options (departure times, airlines, duration), active BootHop carriers on this route who have open capacity, typical delivery times for this route, and customs notes specific to the origin/destination country pair.
/flights/airlines/[code]	User	Airline Detail Page (Dynamic): Airline-specific information page (e.g. /flights/airlines/BA for British Airways). Shows: routes served by this airline, baggage allowance policy (checked and carry-on), BootHop-specific carriage notes (e.g. known restrictions on certain item types), and active BootHop carriers on this airline's routes.
/flights/airports/[code]	User	Airport Detail Page (Dynamic): Airport information page (e.g. /flights/airports/LOS for Lagos Murtala Muhammed). Shows: terminal layout notes, customs contact details, active BootHop journeys departing from this airport, average carrier wait times, and BootHop-specific tips (e.g. NAFDAC inspection desk location at MMIA).

SECTION 10 - UTILITY AND MISC

/open	User	Universal Deep Link Handler: Processes incoming deep links from emails and push notifications. Parses a returnUrl parameter and redirects to the appropriate in-app page (e.g. match detail, declaration form, payment page). Handles auth state - if user is not logged in, stores the target URL and redirects to /login, then resumes after successful OTP verification.
/open-file	User	File Open Handler: Handles opening shared BootHop files from external links. Used for seal QR codes shared via WhatsApp or email. Validates the file reference, checks user auth, and renders the appropriate file view (seal label PDF, declaration receipt, or KYC confirmation letter).
/watch	User	Watch / Media Page: BootHop video content hub. Hosts explainer videos, carrier success stories, and BootHop promotional content. Videos are embedded from YouTube (via the YouTube API). Autoplay feature cycles through featured content. Optimised for WhatsApp sharing links with Open Graph video preview.
