

# BootHop

UK Peer-to-Peer Delivery Marketplace | [www.boothop.com](http://www.boothop.com)

## Web Platform: Business Portal, Admin & Internal Tools

Version 2.0 | August 2025 | Confidential - Internal Use Only

### WHAT IS BOOTHOP?

BootHop is a UK-registered peer-to-peer delivery marketplace that connects Hoopers (people who need goods transported) with Booters (travellers with spare luggage capacity). Instead of paying for a courier, senders pay travellers who are already flying or driving the route - achieving 60-80% savings while travellers earn extra income on trips they were already making.

BootHop handles the full logistics chain: item posting, AI safety checks, KYC identity verification, in-app messaging, a tamper-evident QR seal system, real-time delivery tracking, and manual escrow payment release. A Business Portal serves SMEs needing same-day or priority deliveries, and a Priority Partner tier provides SLA-backed enterprise logistics with dedicated carriers. The platform operates across the web ([boothop.com](http://boothop.com)) and via native iOS/Android apps (BootHop Mobile v1.2.0).

- Section 4 - Commander Internal CRM (6 routes): CRM login, pipeline dashboard, client records, team tools, password management.
- Section 5 - Pipeline & Onboarding (3 routes): Business pipeline form, client onboarding flow, admin manual onboarding.

SECTION 1 - BUSINESS PORTAL

|                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /business              | Business | Business Portal Home: Marketing landing page for the BootHop Business Portal. Target audience: SMEs, importers/exporters, logistics managers. Features: video testimonial reel from business clients, service comparison table (Standard / Express / Priority Partner), live delivery stats, and a sign-up CTA. Highlights unique selling points: next-flight delivery option, no contract lock-in, real-time tracking, dedicated account manager (Priority tier). |
| /business/how-it-works | Business | Business: How It Works: Step-by-step B2B delivery process. Steps: (1) Create a Business Account, (2) Post a Delivery Job (origin, destination, item type, urgency), (3) BootHop matches to an available carrier on the route, (4) Carrier collects and seals the package, (5) Live tracking available throughout transit, (6) Delivery confirmed by recipient - invoice generated. SLA timeline shown per urgency tier.                                            |
| /business/pricing      | Business | Business Pricing Page: Tiered pricing for business accounts. Three tiers: Standard (no monthly fee, per-delivery commission), Express (£99/month, priority matching, 2-hour SLA on UK domestic), Priority Partner (bespoke contract, dedicated carrier pool, volume discounts, API access). Each tier shows included features and a comparison matrix. CTA to /business/get-started.                                                                               |
| /business/get-started  | Business | Business Get Started: Onboarding form for new business enquiries. Collects: Company Name, Company Registration Number, Contact Name, Email, Phone, Estimated Monthly Delivery Volume, Primary Route(s), Urgency Requirements. Submission triggers an email to the business sales team (info@boothop.com) and an auto-reply to the enquirer with expected response time (1 business day). Data saved to Commander CRM pipeline.                                     |
| /business/express      | Business | Express Business Delivery Landing: Targeted page for same-day and next-flight express B2B delivery. Features urgency scenarios: "Your manufacturing line just stopped - we'll fly the part to you tonight." Shows express delivery case studies and typical turnaround times by route. Contact form for same-day quotes.                                                                                                                                           |
| /business/contact      | Business | Business Contact: Dedicated contact form for business enquiries, separate from the general /contact page. Routes to the business sales inbox. Fields: Company Name, Name, Email, Phone, Nature of Enquiry (New Account / Existing Account / Partnership / Press), Message. Auto-assigned to a sales team member via Commander CRM.                                                                                                                                 |
| /business/sign-in      | Business | Business Portal Sign In: Login page for standard business portal accounts using email and password. Uses the separate boothop_biz_session cookie (not the user session cookie). Password login (not OTP) for business continuity. Account is linked to a Company record, not an individual user. Failed login attempts logged.                                                                                                                                     |

|                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /business/priority-sign-in         | Business | Priority Partner Sign In: Dedicated login page for Priority Partner accounts. Higher-security login with two-factor option. Priority Partners have access to the enhanced portal at /business/portal/priority with additional SLA monitoring features and dedicated account manager contact details.                                                                                                                      |
| /business/carrier-sign-in          | Business | Business Carrier Portal Sign In: Login for carriers registered to work exclusively with business accounts (as opposed to P2P carriers). These are vetted carriers with commercial insurance. Separate auth flow using boothop_biz_session with carrier role.                                                                                                                                                              |
| /business/priority-partner         | Business | Priority Partner Programme: Premium B2B tier landing page. Features: dedicated carrier pool assigned to the account, SLA guarantee (98% on-time delivery or credit), dedicated account manager, custom reporting dashboard, API access for automated job posting, invoicing on 30-day terms. Targets logistics managers and operations directors at mid-size companies.                                                   |
| /business/priority-partner/payment | Business | Priority Partner Payment: Payment page for the Priority Partner setup/onboarding fee and first month subscription. Payment is processed via Stripe. On successful payment, the business account is upgraded to Priority Partner tier and a welcome email with portal credentials is sent.                                                                                                                                 |
| /business/carrier-network          | Business | Business Carrier Network: Information page for independent commercial carriers wanting to join the BootHop business carrier network. Eligibility: commercial driving licence or cargo aviation certificate, minimum 6 months delivery experience, valid insurance. Application form: name, contact, vehicle/capacity type, routes, references. Applications reviewed within 3 business days.                              |
| /business/carrier-network/payment  | Business | Business Carrier Network Registration Payment: Payment page for the one-time carrier network registration fee. Covers background check, insurance verification, and initial onboarding training. Stripe-processed.                                                                                                                                                                                                        |
| /business/portal                   | Business | Business Client Portal (Main Dashboard): The core operational interface for business clients. Features: Post a Job (create a new delivery request with urgency, route, item details), Active Jobs List (status, carrier, estimated delivery time), Job History (search, filter, download), Invoice Centre (download PDF invoices per delivery), Account Settings. Real-time status updates via Supabase Realtime.         |
| /business/portal/priority          | Business | Priority Partner Enhanced Portal: Extended portal for Priority Partner accounts. Additional features vs. standard portal: SLA Dashboard (on-time delivery rate, average delivery time, exceptions), Dedicated Carrier Profiles (view and message assigned carriers directly), Custom Reporting (download delivery reports by date range / route / carrier), API Key Management (generate keys for automated job posting). |
| /business/carrier-portal           | Business | Business Carrier Portal: Operations hub for carriers on the business network. Shows: Available Business Jobs (filter by route and urgency), Accepted Jobs (with pickup details and SLA clock), In-Progress Deliveries (with status update buttons), Completed History (earnings summary and ratings). Carriers update job status in real time - client portal reflects changes instantly.                                 |

SECTION 2 - ADMIN HUB

|                               |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /admin/login                  | Admin | <p>Admin Login: Secure admin portal login. Email + password (hashed, not OTP). Issues a separate admin session cookie (not the user cookie). Rate-limited: 3 failed attempts trigger a 1-hour lockout. All login events are logged to the audit table.</p> <p><i>Protected by ADMIN_SECRET environment variable. Admin session cookie is short-lived (4 hours).</i></p>                                                                                                                                                                                                                                               |
| /admin                        | Admin | <p>Admin Root: Entry redirect to /admin/hub. If the admin session is invalid or expired, redirects to /admin/login.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| /admin/hub                    | Admin | <p>Admin Operations Hub: The primary daily-operations control panel for the BootHop team. Shows: Pending Compliance Reviews (REVIEW_REQUIRED flags from the AI check), Pending Payment Confirmations (matches waiting for admin to confirm escrow receipt), Matches Awaiting Payment Release (delivery confirmed by both parties), Active Disputes, New Business Enquiries, Platform Stats (today's match count, GMV, active journeys). One-click approve/release links in each section.</p> <p><i>Primary tool for daily ops. All admin email action links (confirm payment, release funds) route back here.</i></p> |
| /admin/compliance             | Admin | <p>Compliance Dashboard: Full list of all compliance flags across the platform. Columns: Match ID, Item Description, Route, Risk Score (0-100), AI Verdict (PERMITTED/RESTRICTED/PROHIBITED/REVIEW_REQUIRED), Category, Flag Date, Status (Pending/Approved/Rejected). Filter by status, date range, and route. Clicking a row opens the full case detail at /admin/compliance/[matchId].</p>                                                                                                                                                                                                                         |
| /admin/compliance/[matchId]   | Admin | <p>Compliance Case Detail: Full detail view for a single compliance case. Shows: Item declaration (all fields), Carrier and sender profiles, Match timeline, AI safety check output (verdict, risk score, explanation, specific regulation references), Evidence uploads, Admin Notes text field, and two action buttons: APPROVE (advance match past compliance hold) and REJECT (cancel match, notify both parties, trigger refund process).</p>                                                                                                                                                                    |
| /admin/customs                | Admin | <p>Customs Admin Panel: Admin view of all customs declarations submitted by senders on the platform. Filter by: status (pending, reviewed, flagged, approved), declaration date, route, declared value. Admin can: Flag for follow-up, Request additional documentation (triggers email to sender), Approve (mark as cleared), or Escalate to External Verification (routes to a third-party customs broker via the verification providers system).</p>                                                                                                                                                               |
| /admin/journeys/[id]          | Admin | <p>Journey Admin Detail: Admin view of a specific carrier journey. Shows: Carrier profile, Route, Dates, Capacity, All matched requests on this journey with status, Total journey revenue. Admin actions: Cancel Journey (with notification to affected senders), Adjust Capacity, Flag Carrier for Review, View Carrier KYC Record.</p>                                                                                                                                                                                                                                                                             |
| /admin/verification-providers | Admin | <p>Verification Providers Management: Manage third-party verification service providers integrated with BootHop for external compliance checks. Each provider record: Provider Name, Type (KYC / Customs / Insurance Verification), API endpoint, Active/Inactive toggle, Test/Production mode, Last 10 API calls log. Admin can add new providers, rotate API keys, and set priority order for automatic routing.</p>                                                                                                                                                                                                |

|                          |       |                                                                                                                                                                                                                                                                                                                                         |
|--------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /admin/change-password   | Admin | Admin Change Password: Allows admin users to change their admin portal password. Requires: current password, new password (min 12 characters, must include uppercase, number, and symbol), confirm new password. Required on first login with a temporary password issued by the system.                                                |
| /admin/business          | Admin | Business Admin Home: Overview of all business portal activity. Shows: Total Active Business Accounts, Monthly GMV from Business Portal, New Business Enquiries (last 7 days), Accounts Pending Approval, Priority Partner Account Health summary. Links to sub-sections for carriers and ops.                                           |
| /admin/business/carriers | Admin | Business Carriers Admin: Manage all carriers on the business carrier network. Table: Carrier Name, Application Date, Status (Pending/Active/Suspended/Rejected), Last Active, Total Jobs Completed, Average Rating. Actions per carrier: Approve Application, Suspend Account, View KYC Record, View Delivery History, Send Message.    |
| /admin/business/ops      | Admin | Business Ops Admin: Real-time operational view of all live business deliveries. Table: Job ID, Client, Carrier, Route, Urgency, Status, SLA Deadline, ETA. Colour-coded SLA alerts: green (on track), amber (at risk), red (breached). One-click escalate button opens a carrier contact panel. Download ops report button exports CSV. |
| /admin/business/priority | Admin | Priority Partners Admin: Manage Priority Partner accounts. Table: Company Name, Account Manager, Contract Start, Monthly Volume, SLA Performance (%), Last Invoice, Status. Actions: View SLA Report, Assign/Change Account Manager, Adjust Volume Discount, Suspend Account, Export Contract.                                          |

### SECTION 3 - BFI FLIGHT INTELLIGENCE

|             |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /bfi        | Admin | <p>BFI Mission Control (BootHop Flight Intelligence): Live operations intelligence dashboard. Real-time view of: all active flight-linked journeys mapped by route, carrier GPS clusters, AI safety flags in the last 24 hours, payment queue depth, and system health indicators (Supabase, Resend, Stripe, WhatsApp API). Designed for a wall-mounted screen in the operations room. Auto-refreshes every 60 seconds.</p> <p><i>BFI = BootHop Flight Intelligence. Internal ops codename for the live monitoring system.</i></p> |
| /bfi/routes | Admin | BFI Routes Intelligence: All active and historical delivery routes with performance analytics. For each route: Total Deliveries, Average Delivery Time, Average Reward (GBP), Dispute Rate (%), Compliance Flag Rate (%), Revenue Generated (GBP). Sort by any column. Time-range filter. Exportable as CSV or PDF report.                                                                                                                                                                                                         |
| /bfi/logs   | Admin | BFI Activity Logs: Full audit log of all platform events. Columns: Timestamp, Event Type, Actor (user email or "system"), Target (match/journey/user ID), Detail, IP Address. Event types: match_created, payment_confirmed, compliance_flagged, kyc_passed, seal_activated, delivery_confirmed, dispute_opened, admin_action, cron_run. Filter by event type, actor, date range, and entity.                                                                                                                                      |

|                |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /bfi/alerts    | Admin | BFI Alert Feed: Real-time alert stream for events requiring human attention. Alert types: Compliance Flag (AI returned REVIEW_REQUIRED), Payment Overdue (payment_processing for > 4 hours), SLA Breach (Priority Partner job overdue), KYC Failure (3rd attempt failed), Dispute Opened, System Error (Resend/Stripe/Supabase API error). Each alert links to the affected record. Alerts can be acknowledged and assigned to a team member.    |
| /bfi/analytics | Admin | BFI Platform Analytics: Strategic analytics dashboard. Metrics: GMV (Gross Merchandise Value) by week/month/route, Active Users (unique logins per day), Journey-to-Match Conversion Rate, Delivery Success Rate (%), Average Time-to-Match (hours), Revenue Breakdown (commission + business fees + priority partner subscriptions). Charts: line charts for trends, bar charts for route comparison, pie for revenue split. Date range picker. |
| /bfi/reports   | Admin | BFI Report Generator: Generate and download periodic reports. Report types: Weekly Operations Summary (match count, GMV, issues), Monthly Compliance Report (all flags, outcomes, breach cases), Quarterly Revenue Breakdown (by stream), Carrier Performance Report (delivery rate, ratings, KYC status by carrier), Route Health Report. Reports generated as PDF and emailed to admin email.                                                  |
| /bfi/providers | Admin | BFI Third-Party Providers: Management interface for external service providers (verification, customs brokers, logistics partners). Shows provider health status (last successful API call, error rate), contract expiry dates, and integration configuration. Used to manage the ecosystem of services that BootHop connects to for compliance and verification.                                                                                |
| /bfi/airlines  | Admin | BFI Airline Database Management: Admin management of the BootHop airline database. For each airline: Routes, Baggage Allowance (checked and carry-on, by class), Known Restricted Item Policies, Last Updated Date, Active/Inactive toggle. Admin can update allowances and policies as airlines change their rules. Changes propagate to /flights/airlines/[code] pages.                                                                        |

SECTION 4 - COMMANDER INTERNAL CRM

|            |       |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /commander | Admin | <p>Commander CRM Login: Entry login page for the Commander internal client relationship management tool. Separate from the main admin login. Commander is used by the BootHop sales and account management team to track business client pipelines, manage deals, and coordinate onboarding. Login: email + password.</p> <p><i>Commander is a bespoke internal CRM built by BootHop for managing the B2B sales pipeline.</i></p> |
|------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                  |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /commander/dashboard             | Admin | Commander Dashboard: Sales pipeline overview. Shows: All active clients by deal stage (Lead -> Qualified -> Demo Booked -> Proposal Sent -> Contract Signed -> Onboarded -> Churned), Revenue Forecast (sum of potential deal values by stage), Activity Feed (recent calls, emails, stage changes), and Quick Actions (add new lead, log a call, schedule follow-up). Data displayed as a Kanban board and a data table.                                                                                                               |
| /commander/pipeline/[clientSlug] | Admin | Client Pipeline Detail: Full CRM record for an individual business client. Sections: Company Profile (name, registration, industry, size), Contacts (multiple contacts per company with roles), Deal Stage and Value, Activity Timeline (every interaction logged with date/time/actor), Notes (free-text, visible to all team members), File Attachments (contracts, proposals), and Next Action (assigned to a team member with due date). Integrates with the business portal - shows live portal usage stats for onboarded clients. |
| /commander/music                 | Admin | Commander Music: Internal team music tool embedded in the Commander workspace. Provides background music for the operations team during working hours. Integrates with a streaming service playlist. (Internal morale/culture feature - not client-facing.)                                                                                                                                                                                                                                                                             |
| /commander/change-password       | Admin | Commander Change Password: Password change flow for Commander portal users. Standard current/new/confirm password form. Hashed with bcrypt. Required for first login.                                                                                                                                                                                                                                                                                                                                                                   |
| /commander/reset                 | Admin | Commander Password Reset: Self-service password reset for Commander accounts. User enters their registered Commander email, receives a one-time reset link (valid 30 minutes), clicks the link, and sets a new password.                                                                                                                                                                                                                                                                                                                |

## SECTION 5 - PIPELINE AND ONBOARDING

|                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| /pipeline/onboard  | Business | Business Pipeline Onboard Form: Entry form for businesses entering the BootHop sales pipeline - typically reached via a direct link from a sales email or the website. Collects: Company Name, VAT Number, Registered Address, Contact Name, Email, Phone, Estimated Monthly Delivery Jobs, Primary Routes, Service Level Required. On submit, creates a new lead record in Commander CRM and triggers a notification to the sales team. |
| /client-onboarding | Business | Client Onboarding Flow: Client-facing onboarding steps for new business clients after contract signing. Steps: (1) Set up Business Portal account, (2) Invite additional team members, (3) Configure notification preferences, (4) Post a test delivery job, (5) Confirm bank details for invoicing. Progress is tracked and the account manager is notified when each step is complete.                                                 |
| /onboard/admin     | Admin    | Admin Manual Onboarding: Admin tool for manually onboarding new users or business clients when the self-service flow cannot be used (e.g. onboarding at events, corporate accounts requiring manual setup). Admin inputs user details, role, and account type. Triggers the same welcome email sequence as self-service sign-up.                                                                                                         |
